

The Peripheral Nervous System

- Nervous structures outside brain & spinal cord
- Nerves allow the CNS to receive information and take action
- *Functional components of the PNS*
 - Sensory inputs and motor outputs
 - Categorized as somatic or visceral
 - Sensory inputs also classified as *general* or *special*

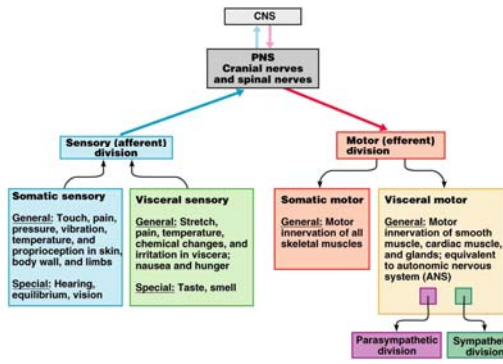

1

The Peripheral Nervous System

- Autonomic nervous system (ANS)
 - General **visceral motor part** of the PNS
 - ANS has two divisions
 - Parasympathetic
 - Sympathetic

2

Functional Organization of the PNS

Basic Structural Components of PNS

- **Sensory receptors** – pick up stimuli from inside or outside the body
- **Motor endings** – axon terminals of motor neurons
 - Innervate effectors (muscle fibers and glands)
- **Nerves and ganglia**
 - **Nerves** – bundles of peripheral axons
 - **Ganglia** – clusters of peripheral neuronal cell bodies

4

Basic Anatomical Scheme of the PNS in the Region of a Spinal Nerve

Peripheral Sensory Receptors

- Structures that pick up sensory stimuli
 - Initiate signals in sensory axons
- Two main categories of sensory receptors
 - **Complete receptor cells** – specialized epithelial cells or small neurons
 - Monitor most types of *special sensory information*
 - Taste, vision, hearing, equilibrium
 - **Free nerve endings of sensory neurons**
 - Monitor general sensory information

6

Classification by Location

- **3 classes based on location**
 1. Exteroceptors – At or near body surface
 - Touch, pressure, pain and temperature in skin and special senses
 2. Interoceptors – “Visceroceptors” – in the visera
 - Chemical concentration, taste, stretch and temperature
 3. Proprioceptors – Musculoskeletal organs
 - Stretch (position of body part)

7

Classification by Stimulus

- **5 classes based on Stimulus**
 1. Mechanoreceptors – Mechanical forces
 - Touch, pressure, stretch, vibrations and itch
 2. Thermoreceptors – temperature changes
 3. Chemoreceptors – Chemicals in solution
 - Taste, smell, blood chemistry
 4. Photoreceptors – Respond to light (eye)
 5. Nociceptors – Harmful stimuli (pain)

8

Classification by Structure

- **General sensory receptors**
 - Widely distributed
 - Two types: Free & Encapsulated nerve endings
 - Nerve endings of sensory neurons monitor
 - Touch
 - Pressure
 - Vibration
 - Stretch
 - Pain
 - Temperature
 - Proprioception

9

Spinal Nerves

- 31 pairs – contain thousands of nerve fibers
- Connect to the spinal cord
- Named for point of issue from the spinal cord
 - 8 pairs of cervical nerves (C₁-C₈)
 - 12 pairs of thoracic nerves (T₁-T₁₂)
 - 5 pairs of lumbar nerves (L₁-L₅)
 - 5 pairs of sacral nerves (S₁-S₅)
 - 1 pair of coccygeal nerves (Co₁)

10

Spinal Nerves Posterior View

Spinal Nerves

- Connect to the spinal cord by the dorsal root and ventral root
 - **Dorsal root** – contains sensory fibers
 - Cell bodies – located in the dorsal root ganglion
 - **Ventral root** – contains motor fibers arising from anterior gray column
 - When an anterior root and a posterior root unite, they form a spinal nerve (motor and sensory)

12

Spinal Nerves

- Spinal nerves split into two main branches
 1. **Posterior (dorsal) ramus**
 - Innervates skin of back and deep back muscles
 2. **Anterior (ventral) ramus**
 - Innervates everything from neck inferiorly
 - Also forms nerve plexuses
 - Nerve plexus – a network of converging and/or diverging nerve fibers

13

Spinal Nerves

Spinal Nerves

Introduction to Nerve Plexuses

- **Nerve plexus** – a network of nerves
- **Ventral rami** (except T₂ – T₁₂)
 - Branch and join with one another
 - Form nerve plexuses
 - In cervical, brachial, lumbar, and sacral regions
 - Primarily serve the limbs
 - Fibers from ventral rami crisscross

16

The Cervical Plexus

- Buried deep in the neck
 - Under the **sternocleidomastoid muscle**
- Formed by ventral rami of first four cervical nerves (C1 – 4)
- Some innervate muscles of the anterior neck
- **Phrenic nerve** – the most important nerve of the cervical plexus
 - Innervates the diaphragm

17

The Brachial Plexus and Innervation of the Upper Limb

- Brachial plexus lies in the neck and axilla
- Formed by ventral rami of C₅ – C₈
- Cords give rise to main nerves of upper limb

18

Nerves from the Lateral and Medial Cords

- **Musculocutaneous Nerve**
 - Innervates the biceps brachii and brachialis
- **Median Nerve**
 - Innervates anterior forearm muscles & lateral palm
- **Ulnar Nerve**
 - Innervates intrinsic hand muscles and skin of the medial hand

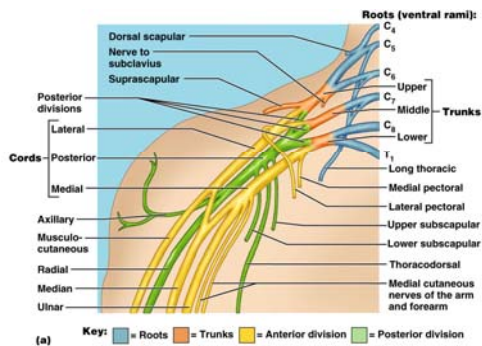

19

Nerves from the Posterior Cord

- **Radial Nerve**
 - Largest branch of the brachial plexus
 - Innervates muscles of the posterior upper limb
- **Axillary Nerve**
 - Innervates the deltoid and teres minor

20

The Brachial Plexus

Axillary and Radial Nerves

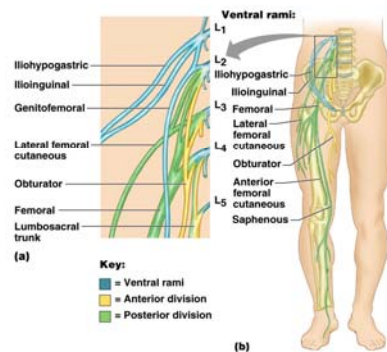

The Lumbar Plexus and Innervation of the Lower Limb

- **Lumbar plexus**
 - Arises from L₁-L₄
 - Smaller branches innervate the posterior abdominal wall and psoas muscle
 - Main branches innervate the anterior thigh
 - Femoral nerve - innervates anterior thigh muscles
 - Obturator nerve - innervates adductor muscles

23

The Lumbar Plexus

The Sacral Plexus

- Arises from spinal nerves L₄–S₄
- Caudal to the lumbar plexus
- Often considered with the lumbar plexus
 - **Lumbosacral plexus**

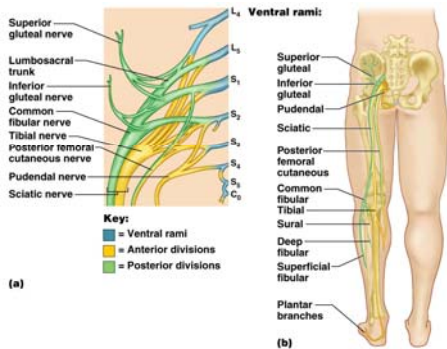

25

Innervation of the Lower Limb

- **Sciatic nerve** – the largest nerve of the sacral plexus
 - Actually two nerves in one sheath
 - Tibial nerve – innervates most of the posterior lower limb
 - Common fibular (peroneal) nerve – innervates muscles of the anterolateral leg

26

The Sacral Plexus

(a)

(b)

Innervation of the Skin: Dermatomes

- **Dermatome** – an area of skin
 - Innervated by cutaneous branches of a spinal nerve
- **Upper limb**
 - Skin is supplied by nerves of the **brachial plexus**
- **Lower limb**
 - Lumbar nerves – anterior surface
 - Sacral nerves – posterior surface
